

ABSTRACT OF THE DISCLOSURE

The present invention provides an element organization support apparatus, an element organization support method and a storage medium for facilitating the addition, deletion or modification of executive elements. This is an element organization support apparatus in which, upon receiving the input of a project to be accomplished including plural tasks from an input unit, a modeling processor searches an activity database for activity data with processible tasks as keys, selects and displays on a display unit real activity candidates, and reads out of a hard disk and displays information on past evaluation of the selected combination of real activities.
